
Contents

Preface · vii

■ **Chapter 1. Introduction to *Mathematica* · 1**

1.1 Executing Simple Expressions

1.2 Defining a Functon

1.3 Lists

1.4 Plotting Graphs

1.5 Calculus

1.6 Differential Equations

■ **Chapter 2. Linear Oscillatory Systems · 25**

2.1 Linear Simple Harmonic Motion

2.1.1 Energy Considerations in Simple Harmonic Motion

2.1.2 Representation on the Phase Plane

2.1.3 Two-dimensional Harmonic Oscillator

2.2 Linear Oscillator in the Presence of Frictional Force

2.2.1 Case 1. Underdamped Motion

2.2.1.1 Energy Considerations in Underdamped Motion

2.2.1.2 Representation on the Phase Plane

2.2.2 Case 2. Critically Damped Motion

2.2.2.1 Energy Considerations in Critially Damped Motion

2.2.2.2 Representation on the Phase Plane

2.2.3 Case 3. Overdamped Motion

2.2.3.1 Energy Considerations in Overdamped Motion

2.2.3.2 Representation on the Phase Plane

2.3 Sinusoidal Driven Oscillations

2.3.1 Resonance Fenomena

2.3.2 Energy Considerations in Rsonance

2.3.3 Representation on the Phase Plane

2.3.4 Impulsive Forcing Functions

2.3.4.1 Response to a Force Step Function

2.3.4.2 Response to an Impulsive Force Function

■ Chapter 3. Nonlinear Oscillatory Systems · 91

3.1 Simple Nonlinear Oscillator

3.1.1 Representation on the Phase Plane

3.2 Simple Nonlinear Pendulum

3.2.1 Representation on the Phase Plane

3.3 Damped, Driven Nonlinear Pendulum

3.3.1 Representation on the Phase Plane

3.3.2 Bifurcation

3.4 The van der Pol Oscillator

3.4.1 Non-driven van der Pol Oscillator

3.4.2 Driven van der Pol Oscillator

Bibliography · 139
